petturnersvast user avatar. It wasn't long ago that a "peak" data plan seemed like an impossibility. After all, as AT&T tried to explain in an earlier FCC filing, "the number of mobile data consumers has increased from approximately 66 million in the United States in 2008 to an estimated 203 million in 2012, representing a 39% increase in just three years." But back in the spring of 2011, AT&T was buying up a bunch of T-Mobile spectrum to help it out: The \$4.5 billion deal included a large chunk of the spectrum formerly used by T-Mobile, a small number of frequencies in the upper C and D blocks of the 700 MHz band, and a license to build the first major nationwide wireless broadband network in the United States. AT&T has already announced it will build the network in roughly 50 cities and towns, starting this year. Sure, it had the largest provider of mobile data in the U.S. now, but that was AT&T. And it also was in the process of buying up T-Mobile, which made wireless data plans cheaper than ever. But then, shortly after the deal was announced, AT&T came out with a statement that effectively raised the number of people who were going to be using data on their phones. The company's chief strategy officer, Ralph de la Vega, stated that AT&T would be "using its spectrum to increase its mobile broadband network capacity in ways that will enable more people to use the Internet on their mobile devices." He went on to say, "We are going to increase data speeds on our mobile broadband network and expand data coverage to more people, including those that are now on wireless 3G networks." That was good news for those hoping to push the envelope on mobile data service in the U.S. But it was quickly followed by news that AT&T was

killing its mobile data service. AT&T stopped selling mobile data plans back in January of this year, after the company pulled a similar move in 2011. So why did AT&T decide to kill off the service this time? The company says that the decision was based on customer complaints, citing that customers were canceling their data plans by the thousands. "AT&T began reviewing its mobile data service and will determine how it is best positioned to serve 82157476af
